Melihat Cara Pemerintah Membersihkan Sungai Citarum-TEMPO Publishing 2020-01-01 GESANG mencipta lagu untuk Bengawan Solo. Siapakah komponis Sunda yang tergerak menciptakan lagu untuk Sungai Citarum? Sungai Citarum "riwayatnya kini" sudah lebih parah dari Bengawan Solo. Pencemaran limbah mengotori sungai sepanjang 360 kilometer itu. Masyarakat tak bisa lagi memanfaatkan air sungai untuk mandi, mencuci, apalagi minum.

Sustainable Industry-Ali Murtopo Simbolon Buku ini menjelaskan tentang teknologi-teknologi yang sudah terbukti dapat mengolah limbah ataupun cemaran yang berasal dari berbagai jenis kegiatan industri. Dalam buku ini juga dijabarkan kontribusi dan hasil litbang terapan dari Balai Besar Teknologi Pencegahan Pencemaran Industri (BBTPPI), Badan Penelitian dan Pengembangan Industri, dan Kementerian Perindustrian dalam penanganan dan pencegahan pencemaran industri. Hasil litbang terapan di buku ini merupakan karya dari peneliti dan perekayasa BBTPPI yang sangat kompeten dan sudah dipublikasikan. Selain itu, buku ini juga membahas mengenai sustainable development yang dapat dijadikan acuan oleh masyarakat industri dalam persiapan menuju industri yang berkelanjutan dan berwawasan lingkungan.

Lucifer - Father of Cain-Zen Garcia 2015-08-25 The esoteric knowledge presented here, represents what are in my belief, some of the most carefully guarded, heavily veiled, and least understood secrets of biblical wisdom traditions. Many have stumbled upon this knowledge without necessarily grasping just what the full implications this knowledge means for unlocking and deciphering the riddles of our Holy Bible as bestowed upon us by our Father Yahweh through the line of prophets and even His only begotten Son Yahushuah Savior Messiah. The secret that unlocks all things biblical is knowledge that Cain was a child of Eve and Lucifer and not the first born son of Adam. Understanding that there are two blood lines upon the planet and that these two bloodlines have been warring with one another since the inception and dawning of humanity upon this world will help one to decipher this critical theme as it plays out through the totality of all available scripture, from the fall to soon coming judgment.

Guides readers through preparation for the newest EnCase Certified Examiner (EnCE) exam Prepares candidates for both Phase 1 and Phase 2 of the exam, as well as for practical use of the certification Covers identifying and searching hardware and files systems, handling evidence on the scene, and acquiring digital evidence using EnCase Forensic 7 Includes hands-on exercises, practice questions, and up-to-date legal information Sample evidence files, Sybex Test Engine, electronic flashcards, and more If you're preparing for the new EnCE exam, this is the study guide you need.

Pond Aquaculture Water Quality Management-Claude E. Boyd 2012-12-06 The efficient and profitable production of fish, crustaceans, and other aquatic organisms in aquaculture depends on a suitable environment in which they can reproduce and grow. Because those organisms live in water, the major environ mental concern within the culture system is water quality. Water supplies for aquaculture systems may naturally be oflow quality or polluted by human activity, but in most instances, the primary reason for water quality impairment is the culture activity itself. Manures, fertilizers, and feeds applied to ponds to enhance production only can be partially converted to animal biomass. Thus, at moderate and high production levels, the inputs of nutrients and organic matter to culture units may exceed the assimilative capacity of the ecosystems. The result is deteriorating water quality which stresses the culture species, and stress leads to poor growth, greater incidence of disease, increased mortality, and low produc tion. Effluents from aquaculture systems can cause pollution of receiving waters, and pollution entering ponds in source water or chemicals added to ponds for management purposes can contaminate aquacultural products. Thus, water quality in aquaculture extends into the arenas of environmental protection and food quality and safety. A considerable body of literature on water quality management in aquaculture has been accumulated over the past 50 years. The first attempt to compile this information was a small book entitled Water Quality in Warmwater Fish Ponds (Boyd l 979a).

The Philosopher At The End Of The Universe-Mark Rowlands 2012-02-29 'It's Schopenhauer and the will. It's Plato, it's Hume, Baudrillard and the concept of the Nietzschean superman!' Keanu Reeves on The Matrix The Philosopher at the End of the Universe allows anyone to understand basic philosophical concepts from the comfort of their armchair, through the plots and characters of spectacular blockbusting science-fiction movies. Learn about: The Nature of Reality from The Matrix; Good and Evil from Star Wars; Morality from Aliens; Personal Identity from Total Recall; The Mind-Body Dilemma from Terminator; Free Will from Minority Report; Death and the Meaning of Life from Blade Runner; and much more. As someone once said, things must be said and knowledge known, and the cast list assembled to tell us does not disappoint: Tom Cruise, Plato, Harrison Ford, Immanuel Kant, Sigourney Weaver, Friedrich Nietzsche, Keanu Reeves and Rene Descartes. From characters in the biggest films (with lots of explosions and bad language) to Ludwig Wittgenstein (no explosions and too much language in general), hear all the arguments. I think, therefore... I'll be back!

Environmental Modeling-Jerald L. Schnoor 1996-10-04 A comprehensive, thoroughly modern approach to environmental quality assessment The only textbook to combine engineering transport fundamentals and equilibrium aquatic chemistry, Environmental Modeling brings a uniquely contemporary perspective to the assessment of environmental quality. Addressing key questions about fate, transport, and long-term effects of chemical pollutants in the environment, this inherently practical text gives readers the important tools they need to develop and solve their own mathematical models. Contains detailed examples from a wide range of crucial water quality areas-conventional pollutants in rivers, eutrophication of lakes, and toxic organic chemicals and heavy metals in both surface and groundwaters Examines current global issues, including atmospheric deposition, hazardous wastes, soil pollution, global change, and more Features over 200 high-quality illustrations, plus skill-building problems in every chapter Fresh in approach and broad in scope, Environmental Modeling is must reading for today's graduate and advanced undergraduate students in environmental sciences and engineering-a rich, invaluable, and superlative new resource.

The Politics of NGOs in Indonesia-Bob S. Hadiwinata 2003-08-29 This book deals with two major issues: how Indonesian NGOs survived under Suharto's authoritarian rule; and how NGOs contributed to the promotion of democracy in the post-Suharto era. If NGOs are to change from 'development' to 'movement' in democratic post-Suharto Indonesia, they must adjust not only their management and working style, but also their very ideology. This comprehensive study will be an important book for scholars interested in Asian studies, Indonesian politics and development studies.

Surface Water Treatment by Roughing Filters-Martin Wegelin 1996 The publication presents the concept, design and field experience of roughing filters applied as pretreatment prior to slow sand filters. It describes treatment processes which convert turbid surface water into clear drinking water. The presented treatment methods are simple, efficient and reliable and therefore appropriate for rural water supply schemes.

Power Generation Technologies-Paul Breeze 2005-02-04 This book makes intelligible the wide range of electricity generating technologies available today, as well as some closely allied technologies such as energy storage. The book opens by setting the many power generation technologies in the context of global energy consumption, the development of the electricity generation industry and the economics involved in this sector. A series of chapters are each devoted to assessing the environmental and economic impact of a single technology, including conventional technologies, nuclear and renewable (such as solar, wind and hydropower). The technologies are presented in an easily digestible form. Different power generation technologies have different greenhouse gas emissions and the link between greenhouse gases and global warming is a highly topical environmental and political issue. With developed nations worldwide looking to reduce their emissions of carbon dioxide, it is becoming increasingly important to explore the effectiveness of a mix of energy generation technologies. Power Generation Technologies gives a clear, unbiased review and comparison of the different types of power generation technologies available. In the light of the Kyoto protocol and OSPAR updates, Power Generation Technologies will provide an invaluable reference text for power generation planners, facility managers, consultants, policy makers and economists, as well as students and lecturers of related Engineering courses. · Provides a unique comparison of a wide range of power generation technologies - conventional, nuclear and renewable · Describes the workings and environmental impact of each technology · Evaluates the economic viability of each different power generation system

Cultivation of Microalgae-Bruno Borges 2017-11 Algae are recognized as one of the oldest life-forms (Falkowski & Raven, 1997). The use of microalgae dates back around 2000 years to the Chinese, who used Nostoc to survive during famine (Spolaore et al., 2006), and to the Aztecs who collected and cultivated Spirulina (Henrikson, 2011). For the past 50 years, extensive research has been performed on microalgae and how they can be used in a wide variety of processes or to manufacture many practical and economic important products. This group of individuals is present in several ecosystems, representing a big variety of species living in a wide range of environmental conditions. Microalgae can be autotrophic or heterotrophic; the autotrophic require only inorganic compounds such as CO2, salts and a light energy source for growth; the heterotrophic are nonphotosynthetic, therefore require an external source of organic compounds as well as nutrients as an energy source (Brennan & Owende, 2009). The cultivation of microalgae is an activity that offers high productivity in dry biomass, compared the production of seaweeds. One important advantage of the cultivation of microalgae is that it can be performed in various locations, due to the use of closed systems of cultivation. In addition, can generate crops throughout the year and has high photosynthetic efficiency and bioremediation potential. There are several groups of individuals who are part of the large group of microalgae; so many differences can be identified with respect to chemical and biological composition of each. Actually, the main genres worldwide cultured are Skeletonema, Thalassiosira, Nannochloropsis, Phaeodactylum, Chaetoceros, Isochrysis, Tetraselmis, Chlamydomonas, Dunaliella and Spirulina. One of the great advantages present in the cultivation of microalgae is the positive appeal to your benefits with regard to the environment. This production plays in a variety of ways to promote sustainability. Microalgae biomass has been proven as a sustainable feedstock for biofuels, feed and numerous value added products that involves nutraceuticals and therapeutic industry (Guldhe, 2016). Microalgae are a highly renewable resource. It can be grown and harvested all year round, in several environments. Production is low impact - microalgae cultivation needs no chemicals or pesticides, in addition to require no deforestation. Knowing the many uses and importance of these organisms to the different sectors of the industry, and your environmental importance, it is essential to maintain the targeted efforts in pursuit of the development of new technologies and applications, as well as improvements in cropping systems and processes used currently.

The Power of Infographics-Mark Smiciklas 2012 Need to overcome information overload and get your message across? Infographics are your secret weapon. Using them, you can deliver knowledge and ideas visually, so your audiences can understand them quickly - and take action. In The Power of Infographics, Mark Smiciklas helps you understand how to leverage the use of powerful infographics: visual representations capable of transforming complex data or concepts into intuitive, instant knowledge. Writing from a business perspective, Smiciklas reveals how to use infographics both inside and outside the organization: to build brands, make sales, serve clients, align teams behind new strategies, and more. This straightforward, visual, common-sense based book explains: * What infographics are, and why they work so well * How to visualize statistical data, business processes, time, geography, lists, relationships, and concepts * How to communicate the "personal" through infographics * Best practices for observation, processing ideas, creating highly effective infographics, and publishing them * How to plan for and measure the ROI of infographics * And much more...
