**Mapping the Edge**-Sarah Dunant 2001-03-30 People go missing every day. They walk out of their front doors and out of their lives into the silence of cold statistics. For

those left behind it is the cruelest of long good-byes. Anna, a self-sufficient and reliable single mother, packs her bags one day for a short vacation to Italy. She leaves her beloved six-year-old daughter, Lily, at home in London with good friends. But when Anna doesn't return, everyone begins to make excuses until the likelihood that she might not come back becomes chillingly clear. And the people who thought they knew Anna best realize they don't know her at all. How could she leave her daughter? Why doesn't she call? Is she enjoying a romantic tryst with a secret lover? Or has she been abducted or even killed by a disturbed stranger? Did that person you loved so much and thought you knew so well did they simply choose to go and not come back? Or did someone do the choosing for them? Dunant, a masterly British suspense writer, skillfully interweaves parallel narratives that are stretched taut with tension even as they raise difficult questions about motherhood, friendship, and accountability. In this compelling hybrid of sophisticated crime writing

and modern women's fiction, Dunant challenges and unnerves us as she redefines the boundaries of the psychological thriller. Missing rubs the soul raw. In place of answers all you have is your imagination.

### **Model-Based Design of Adaptive Embedded Systems**

**Systems**-Twan Basten  
2013-03-15 This book describes model-based development of adaptive embedded systems, which enable improved functionality using the same resources. The techniques presented facilitate design from a higher level of abstraction, focusing on the problem domain rather than on the solution domain, thereby increasing development efficiency. Models are used to capture system specifications and to implement (manually or automatically) system functionality. The authors demonstrate the real impact of adaptivity on engineering of embedded systems by providing several industrial examples of the models used in the development of

adaptive embedded systems.

### **Multinational**

**Management**-Rien Segers  
2016-01-29 This casebook demonstrates that the future of global business lies in how well the multinational landscape is charted and how the importance of Asian market leaders is deeply embedded in it. It offers international management students and researchers an extensive guide to the business history, strategy development, and foreign market entry modes used by emerging Asian multinationals. The cases focus on well-known companies such as Lenovo, Alibaba, Infosys, Huawei, Panasonic, and Rakuten. These companies, all of which generate huge revenues in their own countries (e.g. in China, India, South Korea, Taiwan, Vietnam), are now becoming increasingly sophisticated and striving to become global brands, while also enjoying the active support of their governments in terms of their international business. Readers will learn about the current

**Non-Biological Complex Drugs-**Daan J.A. Crommelin 2015-06-24 The rise of bio- and nano-technology in the last decades has led to the emergence of a new and unique type of medicine known as non-biological complex drugs (NBCDs). This book illustrates the challenges associated with NBCD development, as well as the complexity of assessing the effects of manufacturing changes on innovator and follow-on batches of NBCDs. It also touches upon proven marketing authorization requirements for biosimilars that could be effective in evaluating follow-on NBCDs, including a demonstration of control over the

manufacturing process and a need for detailed physico-chemical characterization and (pre)clinical tests. This book is meant to be used for years to come as a standard reference work for the development of NBCDs. Moreover, this book aims to stimulate discussions and further our thinking to ensure that decisions regarding the approval of complex drugs are made with relevant scientific data on the table.

### **Rare Diseases in the Age of**

**Health 2.0**-Rajeev K. Bali

2013-10-21 This text focuses on various factors associated with orphan diseases and the influence and role of health information technologies. The book highlights the opportunities and challenges in this increasingly important

area. The book explores new avenues which are opened by information technologies and Health 2.0, and highlights also economic opportunities of orphan disease medicine. The editors of this new book have international experience and competencies in the key areas of patient empowerment, healthcare and clinical knowledge management, healthcare inequalities and disparities, rare diseases and patient advocacy.

### **Corporate Governance-**

Sabri Boubaker 2012-12-18

The current crisis has rocked the financial system worldwide and has cast doubt on the effectiveness of the existing regulatory regime. Thousands of firms have gone bankrupt and many financial institutions were bailed out by governments. The effects of the crisis have shaken emerging and developing markets alike and have not spared neither small nor large businesses. Many scholars and practitioners attribute the roots of the crisis to failures and weaknesses in the way corporate governance has been practiced since the mid-1990s. Lax board oversight of top management, short-termism and self-interested behavior have been fingered as the culprits behind recent financial turmoil. This book highlights the recent developments and new trends in corporate governance. The eighteen chapters, written by leading academics and experts, can assist corporate executives, governance bodies, investors, market regulators, and

policymakers in having a global picture of major corporate governance issues. This book highlights the recent developments and new trends in corporate governance. advice result in one terrific resource for anyone eager to tap a customer's ingenuity for creating breakthrough results." —Jeanne Bliss, founder and CEO, CustomerBliss; and cofounder, Customer Experience Professionals Association (CXPA) Organizations need to offer customers breakthrough products, services, and solutions to effectively compete in today's innovation-hungry economy. The challenge is customers often don't know precisely what they want. As Henry Ford is reputed to have said, "If I had asked people what they wanted, they would have said faster horses." To surprise and awe your customers, Chip Bell advises developing co-creation partnerships with them. Co-creation partnerships are about fulfilling customers' hopes and aspirations, not just their needs and expectations. Co-creation partnerships require (1) curiosity that uncovers insight, (2) grounding that promotes clear focus, (3) discovery that fosters risk-taking, (4) trust that safeguards partnership purity,

and (5) passion that inspires energized generosity. Using examples from organizations like McDonald's, DHL, Marriott, Lockheed Martin, Discover Financial, Ultimate Software, and many more, Bell shows how co-creation partnerships enable you to tap into the treasure trove of ideas, ingenuity, and genius-in-the-raw within every customer.

### **Practical Industrial Data Communications**-Deon

Reynders 2004-11-10 The objective of this book is to outline the best practice in designing, installing, commissioning and troubleshooting industrial data communications systems. In any given plant, factory or installation there are a myriad of different industrial communications standards used and the key to successful implementation is the degree to which the entire system integrates and works together. With so many different standards on the market today, the debate is

not about what is the best - be it Foundation Fieldbus, Profibus, Devicenet or Industrial Ethernet but rather about selecting the most appropriate technologies and standards for a given application and then ensuring that best practice is followed in designing, installing and commissioning the data communications links to ensure they run fault-free. The industrial data communications systems in your plant underpin your entire operation. It is critical that you apply best practice in designing, installing and fixing any problems that may occur. This book distills all the tips and tricks with the benefit of many years of experience and gives the best proven practices to follow. The main steps in using today's communications technologies involve selecting the correct technology and standards for your plant based on your requirements; doing the design of the overall system; installing the cabling and then commissioning the system. Fiber Optic cabling is generally accepted as the best approach for physical communications but there are

obviously areas where you will be forced to use copper wiring and, indeed, wireless communications. This book outlines the critical rules followed in installing the data communications physical transport media and then ensuring that the installation will be trouble-free for years to come. The important point to make is that with today's wide range of protocols available, you only need to know how to select, install and maintain them in the most cost-effective manner for your plant or factory - knowledge of the minute details of the protocols is not necessary. An engineer's guide to communications systems using fiber optic cabling, copper cabling and wireless technology Covers: selection of technology and standards - system design - installation of equipment and cabling - commissioning and maintenance Crammed with practical techniques and know how - written by engineers for engineers

**Dreams and Visions**-Tom Doyle 2012 Jesus appears to be revealing Himself to Muslims through powerful dreams and vision throughout the Islamic world today, and the results are dramatic. Eleven years ago, Pastor Tom Doyle felt God calling him to leave the pastorate and become a full-time missionary in the Middle East and Central Asia. Through his extensive work in the region, which includes over 80 trips to places like Iran, Afghanistan, Iraq, Egypt, Syria, Israel, Lebanon, and Turkey, Tom has met and recorded the stories of former Muslims who were first introduced to Jesus through either a dream or a vision that powerfully opened their hearts to become followers of Christ. Though they live in the most dangerous places in the world for people who leave Islam and embrace Christ, their passion for the Savior is contagious and inspirational. These are never-before-told stories from the front lines of the world of Islam. Through these unexplained supernatural occurrences, more Muslims have become

believers in the last ten years than in the last 15 centuries of Islam. Why would God use dreams to reach the Muslim world? Can dreams and visions be trusted? What happens after these people experience a dream or vision? In *Dreams and Visions*, Tom Doyle takes the reader deep into the heart of the Middle East to meet believers who have been directly touched by the very hand of God.

**Oceanography and Marine Biology**-David W. Townsend 2012 Oceanography and Marine Biology preserves the basic elements of the physical, chemical, and geological aspects of the marine sciences, and merges those fundamentals into a

broader framework of marine biology and ecology. I have found that this approach works: my class of 350 students fills every semester it is offered, with students on waiting lists to get in. But existing textbooks on oceanography or marine biology address the companion field only cursorily: very few pages in oceanography texts are devoted to marine biology, and vice versa. This new book overcomes that imbalance, bringing these disparate marine science text formats closer together, giving them more equal weight, and introducing more effectively the physical sciences by showing students with everyday examples how such concepts form the foundation upon which to build a better understanding of the marine environment in a changing world.
