Citizen Coke: The Making of Coca-Cola Capitalism-Bartow J. Elmore 2014-11-03 "Citizen Coke demonstrate[s] a complete lack of understanding about . . . the Coca-Cola system—past and present." —Ted Ryan, the Coca-Cola Company How did Coca-Cola build a global empire by selling a low-price concoction of mostly sugar, water, and caffeine? The easy answer is advertising, but the real formula to Coke's success was its strategy, from the start, to offload costs and risks onto suppliers, franchisees, and the government. For most of its history the company owned no bottling plants, water sources, cane- or cornfields. A lean operation, it benefited from public goods like cheap municipal water and curbside recycling programs. Its huge appetite for ingredients gave it outsized influence on suppliers and congressional committees. This was Coca-Cola capitalism. In this new history Bartow J. Elmore explores Coke through its ingredients, showing how the company secured massive quantities of coca leaf, caffeine, sugar, and other inputs. Its growth was driven by shrewd leaders such as Asa Candler, who scaled an Atlanta soda-fountain operation into a national empire, and “boss” Robert Woodruff, who nurtured partnerships with companies like Hershey and Monsanto. These men, and the company they helped build, were seen as responsible citizens, bringing jobs and development to every corner of the globe. But as Elmore shows, Coke was usually getting the sweet end of the deal. It continues to do so. Alongside Coke's recent public investments in water purification infrastructure, especially in Africa, it has also built—less publicly—a rash of bottling plants in dangerously arid regions. Looking past its message of corporate citizenship, Elmore finds a strategy of relentless growth. The costs shed by Coke have fallen on the public at large. Its annual use of many billions of gallons of water has strained an increasingly scarce global resource. Its copious servings of high-fructose corn syrup have threatened public health. Citizen Coke became a giant in a world of abundance. In a world of scarcity it is a strain on resources and all who depend on them.

China's Regional Relations in Comparative Perspective-Steven F. Jackson 2018-02-06 China's relations with its neighbors have evolved since 1949, and in the 21st century many scholars argue that China's rising power has led it to be increasingly domineering over those smaller countries in Northeast, Southeast, Central, and South Asia. The evolution of China's regional relations needs to be examined comprehensively, since China counts twenty-seven countries as its "neighbors" large and small. While China's official policy toward all of these countries is to treat them as "good neighbors" and "partners," some of these relationships have been spectacularly deteriorating, while others have been quietly improving over the last two decades. Jackson takes a comparative foreign policy approach, and compares China's status as a regional hegemon with the United States, Russia, India, Brazil, South Africa and Nigeria. The result is a broader theory as to why regional powers are sometimes intimidating and at other times accommodating. An important contribution to studies on China, this book will prove useful to scholars and students in Chinese and Asian foreign policy, comparative foreign policy, and international relations.

Notes from the Hyena's Belly-Nega Mezlekia 2015-04-07 In this acclaimed memoir, Mezlekia recalls his boyhood in the arid city of Jijiga, Ethiopia, and his journey to manhood during the 1970s and 1980s. He traces his personal evolution from child to soldier--forced at the age of eighteen to join a guerrilla army. And he describes the hardships that consumed Ethiopia after the fall of Emperor Haile Selassie and the rise to power of the communist junta, in whose terror thousands of Ethiopians died. Part autobiography and part social history, Notes from the Hyena's Belly offers an unforgettable portrait of Ethiopia, and of Africa, during the defining and

turbulent years of the last century.

Aimed at preparing you to clearly and confidently defend your faith, Expository Apologetics sets forth an approach to apologetics that is rooted in Scripture and eminently accessible. The End of Night-Paul Bogard 2013-07-09 A deeply panoramic tour of the night, from its brightest spots to the darkest skies we have left. A starry night is one of nature's most magical wonders. Yet in our artificially lit world, three-quarters of Americans' eyes never switch to night vision and most of us no longer experience true darkness. In The End of Night, Paul Bogard restores our awareness of the spectacularly primal, wildly dark night sky and how it has influenced the human experience across everything from science to art. From Las Vegas' Luxor Beam -- the brightest single spot on this planet -- to nights so starlit the sky looks like snow, Bogard blends personal narrative, natural history, science, and history to shed light on the importance of darkness -- what we've lost, what we still have, and what we might regain -- and the simple ways we can reduce the brightness of our nights tonight.

The Synthetic Age-Christopher J. Preston 2019-02-19 Imagining a future in which humans fundamentally reshape the natural world using nanotechnology, synthetic biology, de-extinction, and climate engineering. We have all heard that there are no longer any places left on Earth untouched by humans. The significance of this goes beyond statistics documenting melting glaciers and shrinking species counts. It signals a new geological epoch. In The Synthetic Age, Christopher Preston argues that what is most startling about this coming epoch is not only how much impact humans have had but, more important, how much deliberate shaping they will start to do. Emerging technologies promise to give us the power to take over some of Nature's most basic operations. It is not just that we are exiting the Holocene and entering the Anthropocene; it is that we are leaving behind the time in which planetary change is just the unintended consequence of unbridled industrialism. A world designed by engineers and technicians means the birth of the planet's first Synthetic Age. Preston describes a range of technologies that will reconfigure Earth's very metabolism: nanotechnologies that can restructure natural forms of matter; “molecular manufacturing” that offers unlimited repurposing; synthetic biology's potential to build, not just read, a genome; “biological mini-machines” that can outdesign evolution; the relocation and resurrection of species; and climate engineering attempts to manage solar radiation by synthesizing a volcanic haze, cool surface temperatures by increasing the brightness of clouds, and remove carbon from the atmosphere with artificial trees that capture carbon from the breeze. What does it mean when humans shift from being caretakers of the Earth to being shapers of it? And in whom should we trust to decide the contours of our synthetic future? These questions are too important to be left to the engineers.

Lies the Government Told You-Andrew P. Napolitano 2010-03-01 YOU'VE BEEN LIED TO BY THE GOVERNMENT We shrug off this fact as an unfortunate reality. America is the land of the free, after all. Does it really matter whether our politicians bend the truth here and there? When the truth is traded for lies, our freedoms are diminished and don't return. In Lies the Government Told You, Judge Andrew P. Napolitano reveals how America's freedom, as guaranteed by the U.S. Constitution, has been forfeited by a government more protective of its own power than its obligations to preserve our individual liberties. "Judge Napolitano's tremendous knowledge of American law, history, and politics, as well as his passion for freedom, shines through in Lies the Government Told You, as he details how throughout American history, politicians and government officials have betrayed the ideals of personal liberty and limited government." —Congressman Ron Paul, M.D. (R-TX), from the Foreword

New Poems-Rainer Maria Rilke 2014-06-03 The formative work of the legendary poet who sought to write "not feelings but things I had felt" When Rainer Maria Rilke arrived in Paris for the first time in September 1902, commissioned by a German publisher to write a monograph on Rodin, he was twenty-seven and already the author of nine books of poems. His early work had been accomplished, but belonged tonally to the impressionistic, feeling-centered world of a late-nineteenth-century aesthetic. Paris was to change everything. Rilke's interest in Rodin deepened and his enthusiasm for the sculptor's "art of living surfaces" set the course for his own pursuit of an objective ideal. What was "new" about Rilke's New Poems, published in two independent volumes in 1907 and 1908, is a compression of statement and a movement away from "expression" and toward "making realities." Poems such as "The Panther" and "Archaic Torso of Apollo" are among the most successful and famous results of Rilke's impulse. This selection from both books unites the companion volumes in a torrent of brilliant work intoxicated with the materiality of the world. Edward Snow has now improved upon the translations for which he received the Harold Morton Landon Translation Award and with which he began his twenty-year project of translating Rilke.
